

CLIMATE CHANGE RESOURCES

AT THE DEPARTMENT OF WATER RESOURCES

Erin Chappell
Delta Regional Forum
December 14, 2012

DWR Climate Program

Team of managers, scientists, engineers, administrators, and interns from headquarters and the regional offices

- ❖ Develop guidance on addressing CC & GHGs
- ❖ Provide outreach & technical assistance

www.water.ca.gov/climatechange

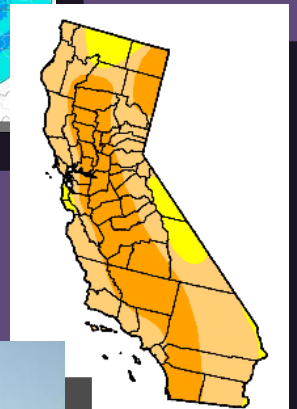

What we've seen...

- ❖ 1° F temp rise
- ❖ 10% reduction (1.5maf) Sierra Nevada snowpack
- ❖ 7" rise in mean sea level @ Golden Gate
- ❖ Shifts in runoff timing and precipitation

In the Next 40 years....

- ❖ 0.9 – 3.6° F temp rise
- ❖ 25 – 40 % less snowpack
- ❖ More intense wet and dry periods
- ❖ Higher flood peaks
- ❖ Less summer runoff
- ❖ Sea Level rise: 5–24” (17–66” by end of century)
- ❖ Increased salinity in the Delta

Climate Change in CWP Update 2013

❖ Regional Reports

- Regionally appropriate adaptation strategies

❖ Future Climate Scenarios

- Climate Change Technical Advisory Group

❖ Resource Management Strategies

- Climate Change Adaptation
- Greenhouse Gas Mitigation

❖ Statewide Strategies

- Highlights & key recommendations

Climate Change Handbook for Water Planning

www.water.ca.gov/climatechange/CCHandbook.cfm

Handbook's Purpose

- ❖ Outline the general process for accounting for climate change in water planning
- ❖ Synthesize available literature in a way that is useful for regional water planning
- ❖ Support IRWM planning in California

What the Handbook is NOT

- ❖ A cookbook
- ❖ A one-size-fits-all methodology or approach
- ❖ An extension of or an addition to the IRWM Guidelines
- ❖ A requirement

CALIFORNIA

Climate ACTION TEAM

Department of Water Resources

Climate change is having a profound impact on California water resources, as evidenced by changes in snowpack, sea level, and river flows. These changes are expected to continue in the future and more of our precipitation will likely fall as rain instead of snow. This potential change in weather patterns will exacerbate flood risks and add additional challenges for water supply reliability.

The mountain snowpack provides as much as a third of California's water supply by accumulating snow during our wet winters and releasing it slowly when we need it during our dry springs and summers. Warmer temperatures will cause what snow we do get to melt faster and earlier, making it more difficult to store and use. By 2050, scientists project a loss of at least 25 percent of the Sierra snowpack. This loss of snowpack means less water will be available for Californians to use.

Climate change is also expected to result in more variable weather patterns throughout California. More variability can lead to longer and more severe droughts. In addition, the sea level will continue to rise threatening the sustainability of the Sacramento-San Joaquin Delta, the heart of the California water supply system and the source of water for 25 million Californians and millions of acres of prime farmland.

The Department of Water Resources (DWR) is addressing these impacts through mitigation and adaptation measures to ensure that Californians have an adequate water supply, reliable flood control, and healthy ecosystems now and in the future. Below are some of DWR's climate change activities.

- » In May, 2012 DWR adopted phase 1 of its Climate Action Plan, a Department-wide [Greenhouse Gas Emissions Reduction Plan](#)
- » In October, 2010 DWR adopted an [Environmental Stewardship Policy](#) which supports a "Total Resource Management" approach to planning activities and projects Department-wide
- » DWR in cooperation with the U.S. Environmental Protection Agency, U.S. Army Corps of Engineers, and Resources Legacy Fund completed the [Climate Change Handbook for Regional Water Planning](#) (2011)
- » DWR released summaries of its climate change achievements as a [Poster](#) and [Brochure](#) (2010)
- » DWR adopted its own [Sustainability Policy](#) to promote a departmental change in the way DWR does business (2009), and established clear and measurable [Goals](#) for sustainability implementation (2010).
[Visit DWR's Sustainability Portal](#) and [Watch DWR's Sustainability Videos](#).
- » In 2007, 2008, and 2009, DWR was a member of the California Climate Action Registry and made the list as a Climate Action Leader by reporting its GHG emissions and having the data verified through a third party audit. In 2010, DWR transitioned to [The Climate Registry](#), a North America-wide climate registry, and continued to provide third party verified GHG emissions inventory data.
- » DWR adopted a [Climate Change Adaptation Strategy](#) (2008)

Other Climate Change Activities

Adapting to the current and future effects of climate change is essential for DWR and California's water managers. DWR addresses climate change in its California Water Plan, which is updated every five years. The California Water Plan provides a framework for water managers, legislators, and the public to consider options and make decisions regarding California's water future. DWR continues to improve and expand the analysis of climate change in the California Water Plan. The [2009 California Water Plan Update](#) includes multiple scenarios of future climate conditions and stresses the inclusion of uncertainty, risk, and sustainability.

California Department of Water Resources Climate Action Plan Phase I: Greenhouse Gas Emissions Reduction Plan

DWR in an effort to reduce its impact on the environment and lead by example, has developed and adopted a Department-wide Climate Action Plan. The first phase of this Climate Action Plan is a Greenhouse Gas Emissions Reduction Plan, which will guide project development and decision making with respect to energy use and GHG emissions.
